PRODUCT INFORMATION T22/2 Standard Harness T22/2 Wide Pad Harness

T22/2

The Willans T22/2 Tree Surgeons Harness is manufactured under the ISO 9001:2008 quality system.

It meets the requirements of EN 813 (Sit Harness) as well as EN 358 (Work Positioning Systems).

The harness, without shoulder straps, is equipped for waist level suspension and has work positioning triangles for use with a pole strop.

The harness is fitted with support webbing with built-in neoprene padding. Crutch straps provide additional security, and "D" rings are provided at waist level for the carriage of tools.

The T22/2 WP Harness meets the same requirements as the T22/2 Standard harness.

Additionally it is fitted with a stiffened wide back-pad. This offers greater support and comfort for the user during prolonged periods aloft.

The T22/2 harness series is available in three sizes small, standard and large.
